

COMMON FARM ACTIVITIES

When do you need environmental authorisation?

NEMA

3

listing notices

123

listed activities

1 of 2 kinds

of Assessments
may be required
depending on activity

National Environmental Management Act (NEMA) is governed by three listing notices, containing in total 123 listed activities that are typically threshold-dependent.

Please refer to
NEMA Listing
Notices 1, 2 and
3 for the full
conditions of all
listed activities.

If the proposed activity exceeds the threshold, NEMA is triggered, and the landowner must submit a **Basic Assessment** or **Scoping and Environmental Impact Assessment** (depending on the activity) for environmental authorisation from the appropriate competent authority:

- Western Cape Department of Environmental Affairs and Development Planning: general developments
- National Department of Forestry, Fisheries and the Environment
- National Department of Mineral Resources and Energy

What can go ahead
without environmental
authorisation?

Brush-cutting firebreaks
according to best practice

Alien plant clearing
according to best
practice

Activities approved as part of a
maintenance management plan
e.g. regular silt clearing of weir

Examples of common farm activities that trigger NEMA

INFILLING OR EXCAVATING

≥ 10 m³ within 32 m of
watercourses

≥ 5 m³ within 100 m of the
coastal high-water mark

PLOUGHING VIRGIN SOIL

≥ 300 m² of endangered
or critically endangered
indigenous vegetation

≥ 1 ha of non-threatened
indigenous vegetation

ELECTRICITY

Generation:
solar farms and
wind turbines

Transmission:
power lines

GENERAL INFRASTRUCTURE

- Tourism accommodation and facilities
- Roads and runways
- Masts

What is indigenous vegetation?

- Contains naturally occurring plants, regardless of level of invasive alien plant infestation
- Old lands left fallow with topsoil undisturbed for ≥ 10 years
- Should be surveyed by a botanical specialist, typically in spring

What is a watercourse?

- Includes the bed and banks of rivers, wetlands, stream, springs, pans, lakes and natural dams
- Can be seasonal or permanent
- May not always be visible above ground
- Should be delineated by a freshwater ecologist

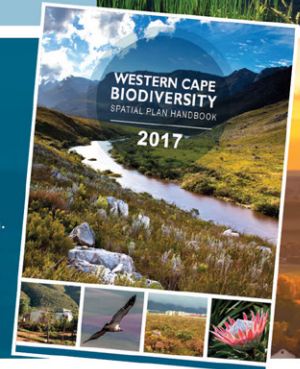

Western Cape Biodiversity Spatial Plan (WCBS)

The WCBS used best-available science to determine biodiversity priority areas. The WCBS Handbook outlines the importance of Protected Areas, Critical Biodiversity Areas, Ecological Support Areas and Other Natural Areas, and guides landowners on appropriate land uses therein.

Download the maps and handbook at <http://bgis.sanbi.org/Projects/Detail/194> or access the maps online from CapeFarmMapper: <http://gis.elsenburg.com/apps/cfm/>
